What about drawing two tables side by side?

Cell 1A A B C D E F			Cell 1D 1	Cell 1D 1
			Cell 2D 1 2 3	
	Cell 10		Cell 12 1	Cell 2D 1 2 3

Cell	Cell 1D 1	Cell 1D 1
Cell	Cell 1D 1	Cell 1D 1
Cell	Cell 1D 1	Cell 1D 1

The following table split on two pages

	 <div>Cell 1BC BB</div>	Cell 1D 1	Cell 1D 1
		Cell 2D 1 2 3	Cell 2D 1 1 2

Cell 1A A B C D E F	Cell 10	Cell 12 1 2 3 4 5	Cell 12 1 2 3 4 5	3
	Cell 12			
	Cell 10 A		Cell 12 1	Cell 12 1

## Demonstration of the attribute min-height for rows

The following two tables have the same cell configuration, however in the first case, the middle row collapse. In the second table, we fix this using of the row attribute min-height.

This is not a bug but an expected behaviour (compare with HTML tables). This happens because, the second row does not contain a cell that span to just one row. Despite the cell has a height given by its content, the second row has height zero

### Without the min-height attribute

Cell 1 Lorem Ipsum dolor sit amet	Cell 2 Consectetur adipiscing elit. Nam quis tincidunt mi	Cell 1 Lorem Ipsum dolor sit amet
Cell 2 Consectetur adipiscing elit. Nam quis tincidunt mi	Cell 1 Lorem Ipsum dolor sit amet	Cell 1 Lorem Ipsum dolor sit amet

### With the min-height attribute

Cell 1 Lorem Ipsum dolor sit amet	Cell 2 Consectetur adipiscing elit. Nam quis tincidunt mi	Cell 1 Lorem Ipsum dolor sit amet
Cell 2 Consectetur adipiscing elit. Nam quis tincidunt mi	Cell 1 Lorem Ipsum dolor sit amet	Cell 1 Lorem Ipsum dolor sit amet

What about to leave a gap between to rows?

Cell 0 A	Cell 1 A B C
Cell 2 A B C	Cell 3 A B
